

Test Strategies from Around the World

A Free RBCS Webinar: 1.5 PDU Credits

This webinar will give attendees an overview of the significant test strategies in use by testers in various industries and business domains around the world. We'll examine: analytical strategies (where testers analyze requirements or risks to identify the test conditions to cover); model-based strategies (where testers develop a model of the environment in which the system exists, the inputs and conditions to which the system is subjected, and how the system should behave); methodical strategies (where testers use a predetermined set of test conditions, such as a quality standard or set of heuristics); process-compliant strategies (where testers follow a set of processes defined by others, such as Agile testing); reactive strategies (where testers react to the actual system under test rather than trying to pre-plan the testing); and, other strategies in common use. You'll understand the pros and cons of each of these strategies, and factors that aid or impede success with them. You'll also learn how to blend test strategies to achieve optimal results, far better than any single strategy can deliver.
