

# Managing Quality within Budget and Schedule Constraints: Successful and Unsuccessful Techniques

A Free RBCS Webinar: 1.5 PDU Credits

In a perfect world, we would have boundless time and resources to deliver systems with plentiful features, each feature having perfect quality. In the real world, we must balance schedule, budget, features, and quality. When schedule, budget, and features get all of the attention, we have a quality quandary. In this webinar, Rex will discuss ways that test professionals can help their project teams resolve that quandary. First, it's important to recognize the trade-offs being made, and then test professionals can promote the five elements of making successful trade-offs: shared vision; disciplined management; quality in, and bugs out, throughout; focused testing; and, sending the right message. Rex will illustrate these five elements with a variety of case studies and examples.
