

# Five Hard-won Lessons in Performance, Load, and Reliability Testing

Performance, load, and reliability tests are hard to design, hard to run, and essential in today's complex IT environments. You need to apply lots of smarts, the right tools, and a pinch of rigor to make it work. In this Webinar, Rex Black will explain:

- Why realistic performance, load, and reliability test environments matter--and how to build them.
- What to do--and what not to do--to generate realistic loads and valid test results.
- How models and simulations can validate your performance testing--and vice versa.
- Where to find the right building-blocks for your tests (hint: expensive commercial tools aren't the only answer).
- When to start performance, load, and reliability testing.

This Webinar will be illustrated by real-world examples drawing on Rex's twenty years of experience with performance, load, and reliability testing.
